

■ FREE GUIDE · @OLLIERDZ

Get Started on GitHub

From zero to your first **repo**, **commit**, and **push** — in plain English. No prior coding required.

```
# what you'll have by the end of this guide
github.com/you/my-first-project
└─ README.md  ✓ committed  ✓ pushed
```

■ STEP 1

Create your **account**

Head to **github.com** and click **Sign up**. Two minutes, free forever.

1 Enter your email, a password, and a **username**.

2 Verify your email.

3 You're in — that's your profile.

Your username matters. It becomes your public URL: github.com/your-name. Keep it clean and on-brand — it's the link you'll share on your résumé and socials.

■ STEP 2

Make your first repository

A repo is your project folder. Let's create one.

- 1 Click the + (top-right) → **New repository**.
- 2 Name it `my-first-project`.
- 3 Choose **Public** (anyone can see) or **Private** (just you).
- 4 Tick **Add a README file**.
- 5 Click **Create repository**.

🎉 You now have a live repo at github.com/you/my-first-project. The **README.md** is the front page everyone sees first.

■ STEP 3

Your first commit

A commit = a saved snapshot. You can do this right in the browser — no install needed.

- 1 Open your repo and click **README.md**.
- 2 Click the **pencil**  to edit.
- 3 Type something: `# My First Project`
- 4 Scroll down → write a short message → **Commit changes**.

Commit message

Add project title to README

✓ committed e4c5a90 — your first snapshot, saved forever

Good messages describe *what changed*, e.g. "Add contact form" — your future self will thank you.

Work from your **computer**

Editing in the browser is fine to start. To build for real, use Git locally.

1. **Install Git** from git-scm.com.

2. **Copy your repo down** (clone it):

```
git clone https://github.com/you/my-first-project.git
```

3. **The everyday loop** — make changes, then:

```
git add .                # stage your changes
git commit -m "what I changed" # save a snapshot
git push                 # send it to GitHub
```

That's 90% of daily Git: **add** → **commit** → **push**. Everything else you'll learn as you go.

■ WHAT'S NEXT

Keep building

★ **Star** repos you love — it's your bookmark + a thank-you to the author.

🍴 **Fork** a project to make your own copy and experiment freely.

🌱 **Build in public** — commit a little every day and watch your contribution graph fill in green.
